BOOK SYNOPSIS

Excerpt from Reclamation of Water From Wastes in Southern California From the information developed in this and related studies, the Department recommends that the agencies involved consider the implementation of specific reclamation projects. Wherever possible, the Department will assist in this program. The Department will include such projects in its current revision of the water management element of The California Water Plan. Amounts of water that can be reclaimed will be included in the analyses of water supply and demand. A concerted effort must be made to move from the planning stage to the actual reuse of reclaimed water. In some cases, water supply agencies will be required to cooperate with agencies providing waste treatment in a manner which has not previously occurred. Failure of such cooperation cannot be permitted to delay reclamation efforts. In the preparation of this bulletin, the Department had the advice of a committee of representatives of a number of public agencies and other concerned citizens. Their contribution has been invaluable. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
